

ANKITH RANUVA

CAREER OBJECTIVE

To work in a challenging environment, contribute to impactful projects, and support organizational growth through innovative ideas, strong technical skills, and consistent high-quality delivery.

TECHNICAL SKILLS

- Scripting Languages: Python, JavaScript, OOJS, React JS, Redux, AngularJS, Angular 2/4/6/8, TypeScript
- Web Technologies: Bootstrap, Material UI, HTML5, CSS3, SASS, SCSS, Styled Components
- Server Side: Node.js, Express.js
- Database: MongoDB, MySQL, PostgreSQL
- IDEs: VS Code, PyCharm, Android Studio
- Version Control: Git, Gerrit

QUALIFICATION

- B.Tech – Computer Science & Engineering
- College: AVN Institute of Engineering and Technology
- University: JNTUH
- Year of Passing: 2021

PROFESSIONAL EXPERIENCE

ASI CYBER SECURITY (April 2023 – Present)

Role: Software Engineer (Frontend/Full-Stack)

- Currently working on DruvStar Data Vision Platform under the parent company.
- Highest-rated engineer in the developer team for performance and delivery.
- Built 5+ major features in one year, significantly boosting product performance and customer satisfaction.
- Developed an advanced login-activity tracking feature showing global access locations with a fully custom UI.
- Designed and optimized dashboards, improved UX, and contributed to high-impact production releases.
- Worked closely with backend teams, improved APIs, and delivered scalable UI modules.

INNOMINDS (2020 – 2023)

Role: Software Engineer

Projects:

1. Druv-Data Vision Platform

- Built UI using React, Redux Saga, HTML5, SCSS, SASS.
- Integrated CubeJS and PostgreSQL for analytic dashboards.
- Implemented API communication using Axios.

2. BrightAuthor UI

- Developed modules with React & TypeScript.
- Fixed critical bugs helping product releases.
- Wrote Jest + Enzyme unit tests.

3. Messenger Web App

- Built WhatsApp-like UI from scratch using React & Redux.
- Implemented real-time messaging with Pusher.
- Created MongoDB database, routing logic, and responsive UI.

4. Phishing Website Detection using ELM

- Researched phishing attack patterns.
- Implemented ML-based classification (ELM).
- Developed backend with Django & MySQL.
- Built UI visualizations using CanvasJS.

5. Web Vulnerability Detection – CSRF

- Designed ML-based solution for detecting CSRF vulnerabilities.
- Implemented Random Forest-based analysis and built a Django web interface.

ACHIEVEMENTS

- Highest-Rated Developer at ASI Cyber Security (Top Performer – Engineering Team).
- Built 5 major production features within 1 year, improving product adoption.
- Developed a real-time login-location visualizer used by enterprise clients.
- Web vulnerability detection research paper (CSRF).
- Python Certification – Udemy
- MySQL Bootcamp Certification – Udemy
- Cisco CPA – Programming Essentials in C & C++
- Two Spot Awards for best project contribution (Innominds).
- Innostar of the Month for outstanding performance.

TRAININGS

- Completed full-stack training: HTML, CSS, JS, Angular, React, Redux, Python, MySQL, MongoDB.
